

What is a hybrid contact lens?

A hybrid contact lens offers the “best of both worlds” for everyday patients as well as for patients with compromised corneas. Hybrid lenses are a familiar size (the same as a soft lens) and deliver clear, crisp vision from a GP (or “rigid” lens) center and comfort from the soft material that surrounds the GP.

UltraHealth is designed for patients with irregular cornea conditions. [UltraHealth](#) contact lenses are made with materials that deliver high levels of oxygen to the eye and promote all-day tear exchange.

UltraHealth Contact Lenses—The Healthy Vision Choice for Irregular Corneas

[UltraHealth](#) offers a combination of vision, comfort and convenience from the newest and most advanced hybrid contact lens. Enjoy the best of both worlds with the crisp vision of a gas permeable (GP) contact lens and the all-day comfort of a soft lens.

Clear Vision and Comfort

- Enjoy clear, crisp vision from the GP center of the lens and comfort from the soft outer portion of the lens. Ideal for all-day wear due to the continuous flow of tears underneath the lens during the day.

Hassle-Free Wear

- Reduce the hassles in your life. UltraHealth is a familiar size... the same as a soft lens, making it easier to handle. And, the soft part of the lens holds the lens in your eye and helps keep the debris out.

Healthy & Refreshing

- The advanced design allows for a healthy flow of tears to circulate under the lens with each and every blink. The new materials allow more oxygen to flow through the lens to your eye.

Sun Protection

- Enjoy added sun protection from the UVA and UVB blocker in the lens.
